FEATURES

- **2-LEVEL PUZZLE.**
  Our solution allowed for a 2-level Puzzle system. By building two levels above ground, this created maximum space and throughput.

- **22 SPACES.**
  We were able to create 22 parking spaces for the 528TLB residents. With space for only 12 surface spots, we nearly doubled their parking capacity using our Puzzle lift design. The site is three doors away from Uber's Uptown Station office.

- **COMPLETION DATE: JULY 2017**
CityLift Parking designs, installs, and services automated parking systems that reduce the footprint needed for parking and can typically be done at a lower cost per space than conventional parking. With over 60,000 parking spaces of our systems installed in 13 countries around the world over the past 15 years, we believe we are the first company that brings a wide range of proven best-in-class products at a great value, combined with a professional-level focus on quality and service.

CityLift is headquartered in Oakland, CA, with offices in Los Angeles, Chicago, Miami, and Boston.
