FEATURES

- **2-LEVEL PUZZLE.**
  Due to the constraints of the project, the developer had to go with automated parking with each space being independently accessible. CityLift’s two-level puzzle system was the perfect solution.

- **EASY TO USE.**
  The automated parking system can be accessed via a remote key fob that is provided to each tenant, or the simple touch screen kiosk. Each space takes only 45 seconds (or less) to retrieve and can safely fit mid-size and full-size SUVs.

- **COMPLETED DATE: 2018**
CityLift Parking designs, installs, and services automated parking systems that reduce the footprint needed for parking and can typically be done at a lower cost per space than conventional parking. With over 60,000 parking spaces of our systems installed in 13 countries around the world over the past 15 years, we believe we are the first company that brings a wide range of proven best-in-class products at a great value, combined with a professional-level focus on quality and service.

CityLift is headquartered in Oakland, CA, with offices in Los Angeles, Chicago, Miami, and Boston.
